Abstract

During a faunistic survey in Golestan province (Northern Iran), 12 species of Pteromalidae (Hymenoptera: Chalcidoidea) in 11 genera were collected and identified. Two species, *Dipara claviger* (Kieffer, 1906) and *Halticoptera triannulata* (Erdos, 1946) are newly recorded from Iran. Updated checklist of Iranian Pteromalidae comprises 295 species in 124 genera is given.

Keywords

Pteromalidae, fauna, Golestan, checklist and Iran.

Introduction

Pteromalidae are the third most speciose family of Chalcidoidea after Eulophidae and Encyrtidae, with 4,257 extant and 26 fossil species in 648 genera (Ghahari *et al.*, 2021). They are distributed in all biogeographical areas of the world, and are mostly primary or secondary, solitary or gregarious parasitoids of holometabolous insects, most commonly of Lepidoptera, Coleoptera and Diptera (Goulet and Huber, 1993; Bouček and Heydon, 1997 and Gibson *et al.*, 2021).

The most comprehensive catalogue of Iranian Pteromalidae has been published by Gibson *et al.* (2021) with 276 valid species and subspecies belonging to 120 genera and 16 subfamilies. References to all the Iranian records with their distribution within Iran and their Iranian hosts are available in it, together with global distribution and taxonomic remarks. Additionally, eight species and four genera were excluded from the fauna of Iran by the mentioned catalogue. After that, other authors have made contributions to the Iranian fauna as follow:

Ghahari (2020): *Dinotiscus aponius* (Walker, 1848), and *Homoporus laeviusculus* Erdös, 1953,

Lotfalizadeh *et al.* (2020): *Homoporus febriculosus* (Girault, 1917), *Norbanus persicus* Lotfalizadeh and Rasplus, 2020, and

Stenomalina delvarei Lotfalizadeh and Rasplus,

2020,

Rahmani *et al.* (2020): *Harrizia mira* Delucchi, 1962, Shojaey *et al.* (2020): *Rhincocoelia impar* (Walker, 1836), Rahmani *et al.* (2021): *Dinarmus altifrons* (Walker, 1862), and *Syntomopus incurvus* Walker, 1833, Shojaey *et al.* (2021): *Coelopisthia areolata* Askew, 1980, *Norbanus brevicornis* Szelenyi, 1974, *Pachyneuron gibbiscuta* Thomson, 1878, and *Sphegigaster pedunculiventris* (Spinola, 1808), Rahmani *et al.* (2022): *Blascoa ephedrae* Askew, 1997, *Plutothrix trifasciata* (Thomson, 1878), and *Homoporus pulchripes* Erdös, 1953 and Taher *et al.* (2022): *Mesopolobus aspilus* (Walker, 1835).

Of course, in addition to the mentioned papers, some other faunistic works have been published on Iranian Pteromalidae but without new country records; so, we do not consider them in this checklist.

Since the catalogue of Gibson *et al.* (2021) comprises all the published records until the end of 2019, so we represent an updated checklist includes all the data after the mentioned catalogue together with two new records (Totally with 19 species further than it).

Materials and methods

The pteromalid specimens of this faunistic survey were caught using Malaise traps and sweeping net in some regions of Golestan province (Northern Iran) during June

to July 2015 and August to September 2017. The specimens are preserved in the private collection of the second author. Here we follow Noyes (2022) for nomenclature, classification and distributional data.

Results and discussion

List of species

In this faunistic survey, in total, 12 species of Pteromalidae within 11 genera were collected and identified from Golestan province.

1. Genus *Caenacis* Förster, 1856

1.1. *Caenacis lauta* (Walker, 1835)

Material examined: 2♀♀, Golestan province, Galikesh, Dar-Abad, 11.6.2015.

General distribution: Austria, Belgium, Bulgaria, China, Croatia, Czech Republic, Denmark, England, France, Germany, Hungary, Iran, Italy, Moldova, Netherlands, Poland, Romania, Serbia, Slovakia, Spain, Sweden and Ukraine.

2. Genus *Chlorocytus* Graham, 1956

2.1. *Chlorocytus breviscapus* Graham, 1965

Material examined: 1♀, Golestan province, Bandargaz, Karkandeh, 27.7.2015.

General distribution: Czech Republic, England, Germany, Hungary, Netherlands, Sweden, Turkey (Noyes, 2022) and Iran (Gibson *et al.*, 2021).

3. Genus *Dibrachys* Förster, 1856

3.1. *Dibrachys microgastri* (Bouché, 1834)

Material examined: 1♂, 3♀♀, Golestan province, Kordkoy, Salikandeh, 10.9.2017; 2♂♂, Golestan province, Golestan National Park, 24.9.2017.

General distribution: Afghanistan, Algeria, Argentina, Australia, Austria, Belarus, Belgium, Bosnia Hercegovina, Brazil, Bulgaria, Canada, Chile, China, Croatia, Cyprus, Czech Republic, Denmark, Egypt, Eritrea, Finland, France, Germany, Hungary, India, Iran, Italy, Japan, Kazakhstan, Kirgizia, Korea, Mexico, Moldova, Morocco, Netherlands, New Zealand, North Africa, Pakistan, Peru, Poland, Portugal, Romania, Russia, Serbia, Slovakia, South Africa, Spain, Sudan, Sweden, Switzerland, Syria, Tajikistan, Tunisia, Turkey, Turkmenistan, Ukraine, England, USA, Uruguay, former USSR, Uzbekistan and former Yugoslavia.

4. Genus *Dipara* Walker, 1833

4.1. *Dipara claviger* (Kieffer, 1906)

Material examined: 2♀♀, Golestan province, Golestan National Park, 24.9.2017. New record for Iran.

General distribution: Bosnia Hercegovina, Croatia, Greece, Italy, Romania, Turkey (Noyes, 2022) and Iran (This study).

5. Genus *Halticoptera* Spinola, 1811

5.1. *Halticoptera patellana* (Dalman, 1818)

Material examined: 1♂, 1♀, Golestan province, Minoodasht, Qaleh-Ghafeh, 22.9.2017.

General distribution: Belgium, Brazil, Canada, Canary Islands, Chile, China, Czech Republic, France, Germany, Hawaii, Italy, Japan, Mexico, Montenegro, Netherlands, Peru, Romania, Russia, Sweden, Switzerland, Taiwan, Trinidad and Tobago, Turkey, United Kingdom, USA (Noyes, 2022) and Iran (Gibson *et al.*, 2021).

5.2. *Halticoptera triannulata* (Erdos, 1946)

Material examined: 2♀♀, Golestan province, Golestan National Park, 24.9.2017. New record for Iran.

General distribution: Austria, China, Czech Republic, Germany, Hungary, Kazakhstan, Moldova, Romania, Slovakia, Sweden, Turkey, United Kingdom (Noyes, 2022) and Iran (This study).

6. Genus *Mesopolobus* Westwood, 1833

6.1. *Mesopolobus sericeus* (Förster, 1770)

Material examined: 3♀♀, Golestan province, Galikesh, Dar-Abad, 11.6.2015.

General distribution: Andorra, Austria, Belgium, Bulgaria, Croatia, Denmark, England, France, Germany, Greece, Hungary, Iran, Israel, Italy, Kazakhstan, Moldova, Netherlands, Romania, Spain, Sweden, Turkey, Ukraine and Wales.

7. Genus *Nasonia* Ashmead, 1904

7.1. *Nasonia vitripennis* (Walker, 1836)

Material examined: 1♂, 3♀♀, Golestan province, Galikesh, Dar-Abad, 11.6.2015; 3♂♂, 2♀♀, Golestan province, Gorgan, Naharkhoran, 23.8.2017.

General distribution: Argentina, Australia, Austria, Belgium, Brazil, Canada, Chile, China, Croatia, Czech Republic, Denmark, Egypt, England, France, Germany, Hawaii, India, Israel, Italy, Japan, Kazakhstan, Kirgizia, Korea, Madeira, Moldova, Netherlands, New Caledonia, New Zealand, North Africa, Norway, Poland, Romania, Senegal, Serbia, Slovakia, South Africa, South Korea, Spain, Sri Lanka, Sweden, Tajikistan, Turkey, USA, Uzbekistan, Zimbabwe (Noyes, 2022) and Iran (Gibson *et al.*, 2021).

8. Genus *Pachyneuron* Walker, 1833

8.1. *Pachyneuron aphidis* (Bouché, 1834)

Material examined: 1♀, Golestan province, Gorgan, Ziarat, 25.8.2017; 3♂♂, Golestan province, Kordkoy, Salikandeh, 10.9.2017; 1♂, 2♀♀, Golestan province, Minoodasht, Qaleh-Ghafeh, 22.9.2017.

General distribution: Argentina, Armenia, Australia, Belgium, Brazil, Bulgaria, Canada, Canary Islands, Caucasus, Chile, China, Colombia, Croatia, Cuba, Czech Republic, Egypt, El Salvador, France, Germany, Greece,

Hawaii, Hungary, India, Iran, Iraq, Israel, Italy, Japan, Kazakhstan, Kirgizia, Korea, Libya, Macedonia, Mexico, Moldova, Montenegro, Morocco, Netherlands, New Zealand, Pakistan, Peru, Poland, Puerto Rico, Romania, Russia, Rwanda, Serbia, Slovakia, South Korea, Spain, Sweden, Switzerland, Syria, Tajikistan, Taiwan, Trinidad & Tobago, Turkey, Turkmenistan, Ukraine, United Kingdom, USA, Uruguay, USSR, Venezuela, Yemen and former Yugoslavia.

9. Genus *Pteromalus* Swederus, 1795

9.1. *Pteromalus puparum* (Linnaeus, 1758)

Material examined: 1♀, Golestan province, Bandargaz, Karkandeh, 27.7.2015; 2♂♂, 3♀♀, Golestan province, Gorgan, Naharkhoran, 23.8.2017.

General distribution: Algeria, Australia, Austria, Azores, Barbados, Belgium, Bermuda, Bolivia, Bulgaria, Canada, Canary Islands, Chile, China, Croatia, Czech Republic, Egypt, El Salvador, Finland, France, Germany, Greece, Hawaii, Hungary, India, Iran, Iraq, Ireland, Israel, Italy, Japan, Kazakhstan, Kirgizia, Macedonia, Madeira, Malaysia, Moldova, Mongolia, Nepal, Netherlands, New Zealand, North Africa, Pakistan, Papua New Guinea, Poland, Portugal, Romania, Russia, Saint Lucia, Saudi Arabia, Serbia, Slovakia, South Africa, South Korea, Spain, Sweden, Switzerland, Tajikistan, Taiwan, Turkey, Ukraine, United Kingdom, USA, Uruguay, former USSR, Uzbekistan and former Yugoslavia.

10. Genus *Systasis* Walker, 1834

10.1. *Systasis tenuicornis* Walker, 1834

Material examined: 1♂, 1♀, Golestan province, Bandargaz, Karkandeh, 27.7.2015.

General distribution: Belgium, China, England, Germany, Hungary, Iran, Kazakhstan, Romania, Spain and Sweden.

11. Genus *Trychnosoma* Graham, 1957

11.1. *Trychnosoma punctipleura* (Thomson, 1878)

Material examined: 1♀, Golestan province, Gorgan, Ziarat, 25.8.2017.

General distribution: Czech Republic, France, Iran, Netherlands, Slovakia, Sweden and England.

Undetermined species

In addition to the mentioned 12 identified species, the below specimens were collected.

1. *Cea* sp.

Material examined: 1♀, Golestan province, Kordkoy, Salikandeh, 10.9.2017.

2. *Glyphognathus* sp.

Material examined: 1♀, Golestan province, Minoodasht, Qaleh-Ghafeh, 22.9.2017.

3. *Hemitrichus* sp.

Material examined: 1♂, Golestan province, Bandargaz, Karkandeh, 27.7.2015.

4. *Pteromalus* sp.

Material examined: 2♂♂, 3♀♀, Golestan province, Golestan National Park, 24.9.2017.

5. *Sphegigaster* sp.

Material examined: 2♂♂, Golestan province, Gorgan, Ziarat, 25.8.2017; 1♂, Golestan province, Minoodasht, Qaleh-Ghafeh, 22.9.2017.

6. *Toxeuma* sp.

Material examined: 1♂, 2♀♀, Golestan province, Gorgan, Naharkhoran, 23.8.2017.

The results of several faunistic surveys on Iranian Pteromalidae indicate that the fauna of these parasitoids is diverse in this country. Until now, species diversity of pteromalids in Northern parts of Iran has poorly been studied. Due to the high diversity of vegetation in Northern Iran, and consequently abundance of pteromalids' host species (Larvae and pupa of Lepidoptera, Coleoptera and Diptera), there is a very rich fauna of these parasitoid wasps in this area (Southern parts of the Caspian Sea). More intensive and extensive surveys by Malaise traps and rearing of the hosts of these parasitoids may yield not only more species of Pteromalidae, but also determination of parasitoid-host relationships in order to establishment of biological control programs.

Recently Rahmani *et al.* (2022) excluded a considerable number of pteromalid species from the catalogue of Gibson *et al.* (2021), and stated that all the pteromalid species recorded by Abd-Rabou *et al.* (2005a and 2019) and Sakenin *et al.* (2008a, b, and 2019) are irrelevant records to Iran. None of the authors of the mentioned paper (Rahmani *et al.* 2022) requested to re-examine the voucher specimens which all of them were identified or confirmed by the authorized chalcidoideologists; of course, neither of the authors of the mentioned paper is authorized expert on Pteromalidae because of several published works on various families of Hymenoptera, and even other insect orders.

Certainly, considering the records under doubtful based on prediction, prejudice or unjustified reasons can't be trusted. In order to exclusion a taxon from a fauna, concrete and reliable taxonomic evidences are necessary, not citing to an old paper (Abd-Rabou *et al.*, 2005b) included a few misidentified species of another taxon (Vespidae!)¹. On the other hand, all the

¹ Regarding to the paper Abd-Rabou *et al.* (2005b), after receiving V. Mauss's agreement, a large parcel included several Vespidae and Apoidea specimens was sent to him

in 2004 to be identified by him, M. Ohl and T. Osten, but have not been done so far (H. Ghahari, pers. comm.).

vespine misidentified species of Abd-Rabou *et al.* (2005b) were discussed and excluded by Dvorak, Ghahari, Carpenter and Abbasi (2012), as well as the masarine misidentified species in another paper. Therefore, there is no need for hasty criticism against authors who always corrected misidentified taxa through re-examining of specimens by the authorized experts.

Misidentification is common in taxonomic works, and respecting H. Lotfalizadeh's taxonomic papers, other three authors of the mentioned paper (Rahmani *et al.*, 2022) had scientific mistakes (Especially doubtful records) in their works. It is important for a researcher to have the courage and honesty to correct the prior published scientific mistakes. Additionally, the authors of the mentioned paper claimed wrongly that the papers Abd-Rabou *et al.* (2005a, 2019) and Sakenin *et al.* (2008a, b, 2019) were published without a peer-review process; while all the mentioned journals are peer-reviewed and the papers were reviewed by at least two anonymous reviewers. Additionally, these journals are published by Egyptian Ministry of Agriculture, or Islamic Azad University of Iran, and are quite creditable.

Updating the checklists is necessary in order to provide researchers with the species diversity of a taxon in various regions of the world, and on the other hand, the species that were previously reported from an area, are not introduced again as new records [e.g., *Psilocera obscura* Walker, 1833 and *Stinoplus etearchus* (Walker, 1848)] had been recorded by Ghahari *et al.* (2015) and Sakenin *et al.* (2008a), respectively, but were reported again as new country records by Rahmani *et al.* (2020b)].

Additionally, Rahmani *et al.* (2022) prepared an incomplete checklist on the Middle East and North African Pteromalidae, while numerous published papers in those countries were not considered and cited. It is great to follow the example of other researchers who published on the Middle East fauna, but in order to preparing a comprehensive checklist, it is necessary to review carefully all the papers, books and other published scientific sources related to the subject.

Finally, the pteromalid species reported by H. Ghahari (In his previous published works), in addition to being previously identified or confirmed by the authorized specialists, but some of doubtful specimens were re-examined by the experts (H. Ghahari, pers. comm.), and thus are reliable. Therefore, regarding to the new published contributions after Gibson *et al.* (2021) and two new records of this survey, the total number of

Iranian Pteromalidae reaches to 295 valid species in 124 genera (Appendix 1). Same as the catalogue of Gibson *et al.* (2021), the present updated checklist comprises only the known species (Not genera with unidentified species); so, six genera with unknown species (*Cea* sp., *Guancheria* sp., *Glyphognathus* sp., *Hypopteromalus* sp., *Oxysyphus* sp. and *Thureonella* sp.) are not included in this checklist until determining the species name.

Acknowledgements

This research was supported financially by Egyptian Ministry of Agriculture and Islamic Azad University (Science and Research Branch). We appreciate K.A. Dzhanokmen (Ministry of Education and Science of the Republic of Kazakhstan) for identification of some specimens, and two anonymous reviewers for their insightful comments and suggestions. Thanks also to H. Ghahari (Islamic Azad University, Iran) for patiently giving full explanations to clear up the ambiguities, and E. Rakhshani (Zabol University, Iran) for publishing the challenging article (Rahmani *et al.*, 2022) that led us to discuss on the subject.
